CONTROL SYSTEM DESIGN

Need a control system designing? Look no further, we can help!

We have years of vast experience designing control systems of all shapes and sizes. If you are looking to install a new control system and you'd like help with the design, look no further than Spectrum Automation Ltd!

Our control system design services

We are experts in control system design and have designed hundreds of systems over the past 30+ years using a variety of different types of hardware and software. Do you have the equipment but unsure how to integrate it into a control system so it all performs and runs seamlessly? We can design and specify a full list of hardware needed for all control systems including PLCs, HMIs, SCADA, Remote I/O, networks, printers, scanners etc. Our designs will make the most of the physical setup on your site and give the best solution tailored precisely to your requirements.

Need to purchase the hardware from the design we've provided?

We can help with that too! If you're happy with the design we have produced and would like us to provide the hardware, just let us know! We're able to provide all the hardware we design and source this from the best, market-leading suppliers worldwide! What's more, we can ship internationally (and manage all this) too!

Contact us today to learn more

If our control system design services are of interest to you and you'd like to learn more, feel free to get in touch in the following ways:

- Call/text/WhatsApp +44(0)1772 952131.
- Email hello@spectrum-automation.co.uk.

An example of a Rockwell PLC which we are able to supply.
