CONTROL SYSTEM TRAINING

Control system training direct from senior software engineers

All our training is provided by senior software engineers who have years of experience in working with the control systems they are providing training on. Our senior software engineers can provide a range of training tailored to your precise requirements on a variety of control systems. All training packages are created bespoke and can be done with our specialist training code or with code from your facility loaded on our extensive test rig system.

Our training services

We can provide training in many areas: PLC (Siemens & Rockwell), HMI (Siemens & Rockwell), SCADA (iFix, FIX32, FactoryTalk), Batch (iBatch, FactoryTalk) and many more systems such as data historians, networking and switch configuration, software installation and PC builds among many more.

Our training is 100% bespoke to your requirements and can last as long as you wish, from a few hours to days/weeks. Training can be undertaken on our extensive test rig system (either at our offices, at your facility or remotely) or on the live site system (at your facility or remotely). The training we provide can take any form you wish - working through actual site issues at your facility, general troubleshooting, how to write code, etc. Training can also either be instructor-led, trainee-led or a mixture of both. Full training manuals and/or slide decks can also be provided depending on your business needs.

Contact us today to learn more

If our training services are of interest to you and you'd like to learn more, feel free to get in touch in the following ways:

- Call/text/WhatsApp +44(0)1772 952131.
- Email hello@spectrum-automation.co.uk.
